FOR SMART BUSINESSES. IS YOURS EQUIPPED TO TAKE ADVANTAGE?

WHO WE ARE

GreenCollar Talent is unique in the Australian business landscape. We are the only carbon and energy contracting and recruitment company with a national presence, and the only firm of our kind staffed by consultants with the experience necessary to make a solid contribution to our customer network.

Our team integrates strong scientific, engineering, technology, finance and consulting backgrounds into one unit that can solve your resourcing issues and help you take advantage of the myriad opportunities available in the renewable energy, sustainability, carbon and environmental industries. We actively maintain a state of the art database of top tier candidates and consultants, tracking their availability and location preferences, and the types of projects and companies they seek to join.

WHAT WE DO

Renewable Energy: GreenCollar Talent has successfully worked with Australian, European and American wind and solar PV companies, as well as with emerging technology providers in the geothermal, biomass and tidal wave energy industries. Our expertise covers project development and management, energy performance contracting, sales and marketing, technical support and operations.

Agriculture, Forestry and Other Land Use: GreenCollar Talent is the Asia-Pacific market leader in Agriculture, Forestry and Land Use (AFOLU). Thanks to close co-operation with our sister company GCS, we have global reach and expertise in sourcing and managing forestry scientists, resource analysts and geographic information system (GIS) engineers. We have sourced consultants who are capable of assessing the commercial feasibility of AFOLU projects and completing the due diligence required to bring them to market.

Carbon Management: GreenCollar Talent has enabled leading Australian and Asian carbon offset providers, carbon accounting firms and banks to source the talent required to trade carbon offsets in the most economical way. Our expertise covers carbon and environmental markets; NGERs and compliance reporting and GHG emissions measurement, monitoring and evaluation.

Sustainability: GreenCollar Talent works closely with several domestic and international consulting companies to deliver market-leading expertise in sustainability. We assist organizations at all stages on the path to sustainability with expertise covering sustainability consulting, energy efficiency (NABERS, GreenStar, Co- & Tri-Generation), marketing and communications and financial modelling.
